Summary

Software Engineering Manager with 8+ years of experience designing and building scalable menu platform systems with real-world impact across 8,000+ restaurant locations. Expert in API integrations, legacy system migrations, and cross-functional technical leadership, delivering multi-million dollar business outcomes through strategic platform modernization initiatives.

Skills

Programming Languages

Python C# JavaScript C++ SQL

Cloud & Infrastructure

AWS Serverless Framework AWS CloudFormation AWS CDK
Terraform Google Cloud Platform

AWS Services

EC2 Lambda Step Functions EventBridge S3 RDS
DynamoDB Athena API Gateway SQS SNS VPC
Route 53 IAM Secrets Manager CloudWatch

Web Development

RESTful APIs GraphQL HTML CSS Typescript Node.js
React

Databases

PostgreSQL SQL Server MySQL DynamoDB DuckDB

Containerization & CI/CD

Docker GitHub Actions GitLab CI

Developer Tools & Monitoring

Git (Gitlab, GitHub) Grafana Lumigo

Operating Systems

Linux (Ubuntu, Debian) macOS Windows TrueNAS

Work

- 2025-11-09 - present

Yum! Brands

Product Implementation Lead - Menu

- Spearheading global implementation and adoption for the Byte Menu Management & Portal across Yum! Brands' markets, defining onboarding best practices and serving as the key technical liaison to ensure seamless integrations and drive platform success.

- 2025-02-26 - 2025-11-08

Taco Bell Corp.

Manager, Software Engineering

- Built MPM Phase 1 technical foundation, designing **pilot implementation architecture**, validation frameworks and risk mitigation systems^{**} for EDM/Hybris-to-Byte Portal transition.
- Provided technical **expertise on menu and order specifications** to cross-functional engineering teams, ensuring **consistent implementation** and **integration standards** across POS, Voice AI, digital channels, and middleware systems.
- Ensured new functionality continuity during platform transitions, providing **technical guidance for Project Fresco** and managing **new experience requirements** while coordinating **multiple overlapping dependency projects** in parallel.

- 2022-09-07 - 2025-02-25

Taco Bell Corp.

Assoc. Manager, Software Engineering

- Managed a team of 14 engineers (6 FTE, 8 contractors) specializing in **API integrations, data pipelines, and cloud infrastructure**, conducting weekly 1:1s and bi-annual performance reviews to drive individual growth and team alignment.
- Architected Byte Portal migration strategy from legacy Hybris/EDM systems, defining technical roadmap with **GraphQL API**

integrations** for event-driven Pricing App and Product/Menu Master phases across **domestic US market**.

- Delivered critical data integrations for **Annspire POS system rollout**, enabling menu generation and pricing updates across 8,000+ locations while supporting **legacy Xenial migration**.
- Facilitated and coached cross-team migration from **legacy platform to event-driven cloud systems** for restaurant master data, implementing solutions while **developing team expertise in AWS stack** (Lambda, DynamoDB, API Gateway, EventBridge, Serverless Framework).
- Supported the successful **national rollout of Touch Kitchen Display System (TKDS)** by delivering and validating **product data and Order Ready Engine (ORE) integrations**, enabling enhanced kitchen workflows and accurate order routing across **8,000+ Taco Bell locations**.

- 2021-05-19 - 2022-09-06

Taco Bell Corp.

Sr. Software Engineer I

- Served as **technical liaison between operations and engineering teams**, translating franchise feedback into actionable enhancements for menu systems that aligned with the marketing experience calendar.
- Mentored team member who delivered the **Next Generation POS Menu System** using **.NET/C# AWS Lambda** modernizing architecture across **7,500+ restaurants**.
- Led consultant coordination and integration design for a **store hours modernization project** featuring **temporary scheduling capabilities**, identifying system gaps during **legacy-to-event-based architecture** migration.
- Organized cross-team design sessions and knowledge-sharing, fostering collaboration and encouraging junior engineer participation to strengthen technical communication across the organization.
- Established platform monitoring and alerting with **Lumigo** while **influencing PS/SRE support team expertise** through strategic

partnership with team leads to improve operational support and incident response.

- 2019-11-08 - 2021-05-18

Taco Bell Corp.

Software Engineer III

- Acted as the **technical lead** for a team of up to 5 contractors, partnering with product owners to **translate ambiguous business goals** into **actionable architecture designs** and **detailed implementation plans**.
- Directed the development workflow and **led code reviews** for the contractor team to enforce **engineering best practices** and **code quality**.
- Spearheaded the technical integration of **new nationwide delivery platforms** (DoorDash, Postmates, and Uber Eats), directly enabling a major corporate strategy that contributed to **a record-breaking 45% year-over-year increase in digital sales** in 2020.
- Shipped a full-stack inventory availability application using **React, Python, SQL, and AWS services** that reduced help desk call volume and delivered **over \$2 million in cost savings and revenue increase**.
- Contributed to **Diablo serverless ETL framework** using **AWS** (S3, Lambda, DynamoDB, SNS/SQS, and Step Functions) to build highly scalable pipelines that **replaced costly Talend infrastructure**.

- 2018-08-08 - 2019-11-07

Taco Bell Corp.

Systems Engineer II

- Developed, maintained, and supported the data pipelines for the new **Menu Middleware (MMW) system** (the **single source of truth**) that powered the **Grubhub** and **Kiosk** platforms, contributing to **9% system-wide sales growth** and **over \$250 million** in first-year digital sales.
- Optimized the reliability and performance of the MMW data pipeline by resolving **Talend** job defects and tuning **AWS Lambda** (C#) code and configurations.

- Engineered and supported the backend systems and APIs for the **Grubhub** integration project, ensuring reliable **menu distribution** and **order processing**.
- Supported the expansion of **Kiosk 2.0** to include **alcohol ordering for the first time**, coordinating with **product stakeholders** while resolving critical integration issues.

- 2017-10-02 - 2018-08-07

Taco Bell Corp.

Systems Engineer I

- Designed and developed a **Selenium** automation tool using **Python**, **Pytest**, and the **Page Object Model (POM)** to automate payment device transfers, **reducing processing time by over 90%**.
- Authored comprehensive training materials and technical documentation for kiosk system rollout, **conducting training sessions** and enabling standardized deployment to over 7,000+ stores nationwide.
- Drove significant stability improvements across mission-critical FOH systems (**POS**, **Kiosk**, **Payment Systems**) by leading L3 initiatives in **root cause analysis**, **PVT**, and proactive **dashboard monitoring**.
- Executed regular maintenance and updates to maintain system health and security across the FOH technology stack.

- 2017-03-27 - 2017-10-01

Taco Bell Corp.

IT Intern

- Independently architected and developed a **data pipeline** using **Python**, **AWS S3**, and **Athena** to collect and analyze storage drive health data from the Back of House (BOH) PCs of **over 6,500 restaurants** nationwide.
- Reduced unnecessary drive replacements by **over 30%** and identified 40+ faulty drives that vendors were reintroducing into the field, prompting a process overhaul and improving diagnostic accuracy for service desk analysts.

- Refactored the full-stack codebase (**Python**, **SQL**, **JavaScript**, **HTML/CSS**) for the Food Cost Analysis app (a menu pricing and profitability tool) on **AWS EC2**, resolving critical production issues to improve its stability for Operations
- Delivered key code updates (bug fixes, security patches, and features) and built **software releases** to improve Back of House (BOH) system stability.

Education

- 2013-08-24 - 2017-05-20

California State University, Fullerton

Bachelor of Science in Computer Science

Graduated Cum Laude

Dean's List (All Semesters)

Key Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Software Engineering
